FOR IMMEDIATE RELEASE

M.A. MORTENSON SELECTS END II END FOR CONSTRUCTION SITE CONNECTIVITY

CHARLOTTE, N.C., August 8, 2005, -- End II End Communications, Inc. (End II End), a leading provider of network security and optimization software for terrestrial and satellite Wide Area Networks (WANs), today announced it had been selected by Minneapolis, MN based M.A. Mortenson Company (Mortenson), to provide remote connectivity to construction sites.

As one of the nation's leading construction companies, Mortenson's current project operations extend into 47 states and a number of select international locations. The company is involved in a wide variety of commercial building types ranging from corporate office facilities and healthcare projects, high tech manufacturing and network/data facilities, to sports, hospitality and educational facilities. In addition, Mortenson has specialized in a variety of industrial facilities types, from hydroelectric, wind and combustion turbine energy production to water/waste water treatment and pulp and paper processing. Their project costs range from less than \$1 million to more than \$300 million.

The deal comes in the wake of a successful pilot that showcased how End II End's Gateway Security and Optimization solution both secured and enhanced the performance of Mortenson's Citrix applications. The first live deployment of the End II End's innovative software is slated for the new wind farm energy project located on the side of a volcano in Maui, Hawaii.

While delivering secure enterprise applications to isolated locations might be daunting to most, End II End relishes the challenge. According to John Dwyer, CEO of End II End, "At End II End, we welcome the opportunity to deploy our solution in these geographically remote locations as it validates our motto to help our customers run their applications anywhere they do business. Added Dwyer, "Talk is cheap. Many providers say they can deliver a secure global network; we like to let our deployments speak for themselves."

Mortenson's Enterprise Systems Manger, Mark Calkins, is very excited about the deal. "End II End's software is the 'magic bullet' - the missing piece to our networking puzzle. With End II End, we can now deploy our enterprise applications anywhere in the world within a couple of weeks."

About End II End Communications, Inc.

End II End Communications, Inc. (End II End) is a leading provider of network security and optimization software for terrestrial and satellite Wide Area Networks (WANs). The company's patent-pending optimization and management technologies are the foundation for our breakthrough Gateway Security and Optimization software which delivers maximum security and performance for ALL enterprise applications over terrestrial and satellite networks. Customers such as **BASF**, **Jordache** and **National Gypsum Company** use our unique software to slash their IT spending while enhancing network security and

performance. Service providers use End II End's software to sell high-margin, turnkey managed services such as IP VPN, Firewall, Intrusion Detection (IDS), Network Management and Reporting, Network Monitoring and Business Continuity. End II End was founded in 2001 and is headquartered in Charlotte, NC.
