

FOR IMMEDIATE RELEASE

End II End Forms Alliance with VoIP Provider SimpleSignal

Charlotte, North Carolina, November 27, 2006 - End II End Communications announced today that it has entered into a reseller alliance with SimpleSignal in order to add a sophisticated VoIP package to the End II End's Optimal family of products, which optimize the enterprise WAN for secure high performance over high-latency connections including satellite.

Based in Charlotte, North Carolina, End II End is the first software company to enable a true "VPN in the Sky," which makes it possible for mission-critical applications such as Citrix, MS Exchange and SAP to run securely and with LAN-like performance over both satellite and terrestrial networks.

SimpleSignal's enterprise-grade service will further support and enhance usage of satellite by small to medium-sized businesses with a need for secure, reliable satellite network capabilities. These companies typically have offices spread across the country or continents, but need them to be fully functional, especially in the event of an outage at the main datacenter or headquarters, at all times.

SimpleSignal is a full-service business VoIP provider based in Dana Point, California, whose enterprise-grade service is designed specifically for businesses with up to 100 phones, combining voice and data, hosted PBX, long distance and conferencing into a single communications solution. According to the company, its system is seen as a useful tool for a growing enterprise seeking greater flexibility, simplicity, and personalized service with IP technology. SimpleSignal's system is deployed worldwide, and in over 40 states in the USA.

"We view our alliance with Simple Signal as an efficient way to provide quality voice service over all forms of communications," said End II End CEO, John X. Dwyer. "Based on the testing conducted in our lab, what separated them from the competition was the product's capabilities in the area of satellite delivery. Like our Optimal products, theirs is easy to implement and the quality of the voice product over satellite is, in our view, spectacular."

"We view our relationship with End II End as a way to extend our client base and take our clients' productivity and business efficiency requirements to a next level," said SimpleSignal's CEO, Preston Wilson. "We work to provide our clients with advanced, reliable technology to improve their business. We know that smaller businesses, especially those on a growth curve, have a need to use a satellite solution and need reliable, secure communications. End II End's satellite deployment offerings, their ability to optimize the WAN, provide secure links and a enable a fully functional office anywhere on the planet, fit our strategic objectives."

End II End includes among its clients BASF, National Gypsum, Jordache and Swift Energy. Over the past year the company has worked closely with the satellite community to become the applications bridge between the industry and the enterprise customer. Earlier this year, the company announced that it has joined the iDirect IP Alliance.

About End II End Communications, Inc.

End II End Communications develops products that optimize, secure and manage the wide area network, enabling your enterprise applications to go where they have never gone before. Our Optimal products let your end users get down to business wherever they do

business, while minimizing network costs and downtime. For last-mile connectivity or seamless business continuity, they deliver:

- Robust, LAN-like performance for mission-critical applications like Citrix, SAP, MS Exchange and Oracle over high-latency connections including satellite
- An end-to-end, industry-standard security solution in a single, multifunctional product
- The power to manage and monitor all sites and network services from the data center, applying changes across the entire WAN with a single click

End II End also offers total solutions for network deployment, business continuity and disaster recovery that combine software, hardware and satellite services to overcome local or global challenges to enterprise-class connectivity. Founded in 2001, End II End is headquartered in Charlotte, North Carolina. More information is available at www.eiiecomm.com.

About SimpleSignal

SimpleSignal is a full service business VoIP provider. The company's enterprise-grade service is designed specifically for small to medium sized businesses with four to 100 phones, combining voice and data, hosted PBX, long distance and conferencing into one powerful, cost effective communications solution.

SimpleSignal delivers more capabilities than on-premise PBX systems, with greater flexibility, simplicity, and personalized service. Now any size business can leverage the power of advanced IP communications technology, improving business productivity, while significantly reducing overall telecom costs. SimpleSignal is privately held and headquartered in Dana Point, CA. Their service is deployed in over 40 states and 6 foreign countries. More information is available at www.simplesignal.com.
